Dear COVE Hiring Team,

The vision of COVE's **Digital Harbour** project instantly resonated with my passion for leveraging technology to solve real-world challenges and contribute to impactful innovation. As a Computer Science student at Carleton University with practical experience as a **Software Engineer at Transport Canada** and a **Full-Stack E-Commerce Developer/Co-Founder**, I'm genuinely excited by the prospect of applying my skills in **Python, JavaScript, SQL, and AWS**, alongside my understanding of **software testing principles** and **deployment practices**, to enhance the platform's capabilities. My diverse background has equipped me with a strong foundation in **full-stack development, data engineering**, and the ability to thrive in dynamic, collaborative environments, making me eager to contribute to a team dedicated to accelerating marine technology and fostering significant economic growth. I am confident my analytical mindset and problem-solving abilities, honed through hands-on project experience, will allow me to seamlessly integrate new functionalities, optimize software components, and actively participate in the collective journey of discovery and advancement that COVE champions.

Sincerely,  
Simon Amable
